

What are the VTrans Mid-term Needs?

A main task for VTrans is to identify multimodal transportation issues around the Commonwealth that can be addressed by various funding programs (including SMART SCALE). The Mid-term Needs were identified using performance measures for congestion, reliability, accessibility, and safety throughout the state's network. In addition, local transportation needs in Urban Development Areas were identified by applicable localities.

Why are the Mid-term Needs important?

Mid-term Needs help us identify existing and anticipated transportation issues, so that we can find solutions in an efficient and responsible way. The Mid-term Needs will help inform how public funds are allocated for transportation projects.

WHAT DO YOU THINK? *FILL IN "I AGREE" OR "I DISAGREE", AND SHARE YOUR IDEAS.*

The VTrans team has developed a set of Draft Mid-term Needs based on performance measures and informed by input from transportation planning stakeholders around the state. Now we'd like to hear your input on whether the Draft Needs reflect your planning priorities and if not, what might be missing.

Take a look at the Draft Needs displayed on our posters today and let us know your thoughts.

Do you agree with the Needs as shown? If not, tell us why.

Congestion Needs

- I agree
- I disagree

Accessibility Needs

- I agree
- I disagree

Reliability Needs

- I agree
- I disagree

Safety Needs

- I agree
- I disagree

...and here's why:
